Summary

I am used to implementing figma's interface design, responsive, applying semantic HTML, compatible across platforms, and always open to input or feedback from users. In the past two years as a frontend developer, I have used several popular frameworks such as ReactJS, NextJS, VueJS, and NuxtJS but currently focusing on ReactJS and NextJS, and also learning React Native. I have implemented reusable components, state management using Redux, Vuex, and Zustand. In the development process, I am used to the agile method where my team and I work together in each sprint to complete the task. However, continuous learning and exploration is the fuel for continues skill improvement.

Skills

- HTML
- CSS
- Javascript
- Typescript
- SCSS
- React.js
- Next.js
- Vue.js
- Nuxt.js
- Shadcn UI
- Tailwind CSS
- Bootstrap
- Redux Toolkit
- Zustand
- Vuex
- Agile/Scrum

Work Experiences

Frontend Developer (Part time) | Agtran Sdn. Bhd. - Malaysia
September 2023 - November 2023

- Collaboration within the team to streamline project delivery.
- Orchestrated data integration using GraphQl to enhance system efficiency.
- Utilized a tech stack comprising Next.js, Tailwind CSS, Shadcn UI, Zustand, and Typescript to drive robust development and user-centric solutions.

Frontend Developer (Full time) | Fishlog - Bogor, Indonesia
December 2022 - November 2023

- Developed a web application using React.js, React Bootstrap, SCSS, and implemented Redux Saga for efficient state management.
- Integrated diverse data sets through Rest API to optimize system functionality.
- Collaborated within a team using agile methodology to ensure synchronized efforts and iterative development.

Frontend Developer (Full time) | Agtran Sdn. Bhd. - Malaysia
November 2021 - December 2022

- Developed responsive web-based and mobile applications using some tech stack such as Vue.js, Nuxt.js, and Flutter
- Implemented UI designs from Figma that already created by UI/UX team.
- Ensuring seamless integration of APIs and GraphQl for enhanced functionality and user experience.

Programmer (Internship) | PT. Bejana Investidata Globalindo - Bandung, Indonesia
November 2020 - March 2021

- Contributed to the creation of various client applications by addressing bugs and implementing new features.
- Collaborated within an agile team framework and executed UI/UX designs.
- Utilized technology stacks including October CMS, React.js, CodeIgniter, and Flutter.

Education

Politeknik Negeri Indramayu | Indramayu, West Java
2018 - 2021

Diploma III Informatics Engineering
Final Project: Implementation of Microservice Architecture in the student tuition payment application
at Dar Alquran Arjawinangun Islamic Boarding School.

Certification

Basic Application Programmer | BNSP - LSP Politeknik Negeri Indramayu

Language

Indonesia - Native Language

English - Intermediate

Portfolio

Company Project

Fishlog WMS Web

- Web application for Fishlog warehouse Management System.
- Built using React.js, and Bootstrap as the UI library, coupled with SCSS.
- Collaborated with PM, QA, and Backend Dev in building this project.
- Data integration with Rest API.

Agtran Fleetsync Admin

- Web application for agtran admin in managing incoming reservations or making revisions, scheduling, master data, etc.
- This web application was created using the Next.js framework (typescript), then the UI framework uses Shadcn ui based on Tailwind CSS.
- Collaborate with Backend Developer in doing data integration.
- Data integration with GraphQl.

Agtran Web | www.agtran.com

- A website of Agtran Sdn. Bhd. for car rental services, where users can make reservations for the car they want to rent.
- Created using Nuxt.js framework, and Tailwind CSS for the UI library.

XCESS Mobile App

- Mobile application of Agtran Sdn. Bhd. which is used for staff or admin in managing car reservations by users.
- This application was created using Flutter, and GetX for state management.

Personal Project & Playground

Personal Website   https://imam-sulthoni.vercel.app/

- Personal website for personal branding, containing information about myself, work experience, and direct contact to my email.
- Created using NextJS (Typescript), with Tailwind CSS ui library, also Framer Motion to add animation to the display component.
- Deployed on Vercel.

Weather Info Web   https://react-weather-info.vercel.app/

- Website to show information of today weather, and forecast.
- Created using Vite + ReactJS (typescript), with Tailwind CSS ui library.
- API Integration using openwathermap to get today weather and forecast, and for the city location search using geoDB cities from rapidapi.com.
- Deployed on Vercel.

ReactJS Dashboard Starter   https://react-tailwind-dashboard-starter.vercel.app/

- A web starter dashboard that can be used if there is work that requires a dashboard view, then this can be used to speed up the layout process, and also menu routing.
- Created using ReactJS CRA, with Tailwind CSS ui library.
- Deployed on Vercel.
